

Export Directives on Stock Clearance and Maintenance

Stock clearance must be approved by Herth+Buss.

The basis for stock clearance is the latest stock recommendation from Herth+Buss.
The stock clearance is carried out 12 months after the stock has been established.

Our sales manager in charge will examine the article list that we prepare for the stock clearance on the basis of the latest recommendation. The goods must be in perfect and in resalable condition, i.e.:

- a. not fitted or soiled,
- b. in the original packaging,
- c. the original packaging may not be damaged, or lettered or labelled.

The returned goods must be immaculately packed sorted by product groups (this enables faster processing), heavy parts at the bottom and light parts on top so that the goods are not damaged in transport. If you send several pallets/pallet cages we need a packing list for each pallet/pallet cage. You will get an individual credit note for every single pallet/pallet cage.

The goods must be sent back with **DAP / DDP**.

The stock clearance will be credited according to the current price list without processing costs.

Each further stock clearance will generally be charged with a 10% handling fee on top of the current price list.

Herth+Buss must approve in writing the wish to return goods for stock clearance, i.e. the customer submits his desire for a return shipment in writing in the form of an Excel file. This is examined by us and revised by our sales manager for approval.
(Was the article delivered by Herth+Buss? Can the parts be resold?)
