 **HERTH+BUSS**

“Real-life” implemented improvement process

We, the management are committed to the TQM concept, because we value the trust our customers place in us and want to maintain it in the long term.

We see our relationship with our customers as a partnership which must be constantly improved. As a result, we continuously check even established processes for opportunities for improvement.

And not because anyone is forcing us to do so, because we have met the criteria for the ISO certification for a long time.

Instead, we are motivated by the chance to achieve even better results in our work together and to help our customers to increase their competitiveness and hence secure their long-term success.

That is what we call a “real-life implemented improvement process”, and it is also what our many long-term customers especially appreciate about their cooperation with Herth+Buss.

We are certified according to:

- ISO 9001:2015 Quality management
- VDA 6.2 Quality management
- StVZO Verification

The specialist in vehicle electrics!

With our Elparts range we offer a comprehensive product spectrum that meets any requirement, from automobiles to commercial vehicles. This is our professional workshop solution and that's why we're always first choice.

Our services for you:

- over 6,200 universal parts
- over 3,000 vehicle-specific parts with 666,000 vehicle links
- comprehensive range for all vehicle types
- exactly fitting parts allocation
- professional solutions thanks to over 90 years of experience

Installation by specialist only

The VDA working group for suppliers' aftermarket business is the representative of parts manufacturers in the German automotive industry, with their global heads in the aftermarket area. One of the main issues addressed by the group is the use of parts safety to constantly guarantee or increase road safety for drivers.

It has been noted that driver safety can be especially put at risk by improper installation of parts that are intended for installation by a workshop, not unqualified persons.

The aftermarket working group has therefore commissioned a pictogram for "Installation by specialist only". This pictogram for international use can be attached to the packaging of workshop parts for information purposes and indicates to the consumer that installation by a specialist workshop is recommended. The pictogram symbol has been developed as part of a market research study and successfully tested for clear understanding in a range of countries.

» REPCAB

Wiring harness repair kits for doors, tailgates and boot lids

With RepCab, the new repair cable set in the Elparts range, faulty cables in the original cable set on doors, tailgates and boot lids can be easily repaired and replaced.

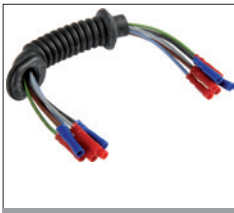

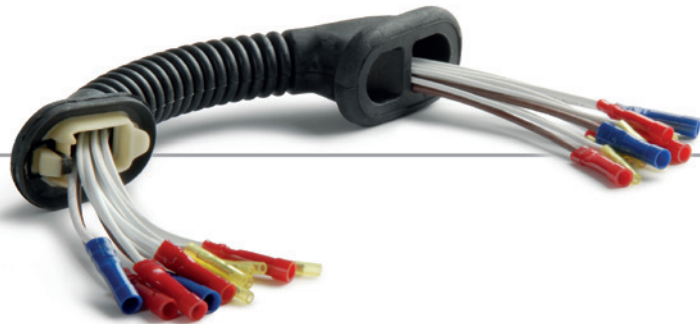

The defective cables are cut out and replaced with the repair cable set with components such as rubber sleeves and grommets. It provides garages with an innovative and cost-effective product for resolving cable damage, with outstanding features including excellent cable quality and

easy and quick installation.

Note: The number of conductors in the OE cable set can differ from that of the RepCab.

We provide you with cable sets for all common types of German vehicles and also have sets for Italian and Asian vehicle types in our product range.

Plug repair kits

With RepCon, damaged plug connections in the vehicle can be repaired and replaced easily. The required crimp connectors (including cable which has already been crimped) are included in the scope of supply. Our portfolio of products in the Elparts range includes plug repair kits for a wide variety of vehicle applications, including plug connections on:

- Licence plate lights, headlights, combination rearlights
- Coil-on-plug ignition coils, injector nozzles, glow plugs
- Level sensors on xenon headlights
- EGR valves, heater fan motors
- Parking sensors, lambda sensors and air mass sensors

Connector Cable, camshaft sensor

Oil leaking from the camshaft sensor plug is a familiar problem on Mercedes-Benz petrol engines. The fault is design-related and cannot be rectified in the long term by replacing the sensor. Due to the capillary effect, the oil can infiltrate the harness to reach the control unit and eventually cause electronic failure and damage to individual parts. Such damage can be prevented with the Herth+Buss oil-stop cable. Fine copper sleeves have been incorporated into both lines of the oil-stop cable in order to prevent the oil from spreading. These

have subsequently also been wrapped in heat-shrink tubing. We recommend installing one oil-stop cable on every M111 (engine code), two on every M271 and as many as four on every M272 (V6).
How long does it take to fit the oil-stop cable? Fitting it will take a maximum of five minutes. Detach the harness from the sensor before inserting the oil-stop cable from Herth+Buss between the connection on the sensor and the old harness.

» KNOW+HOW

Know+How: Repair kits for antenna lines (FAKRA plugs)

	Antenna cable, FAKRA Article number: 51277241, -243
	Antenna cable, antenna line Article number: 51277244, -245
	Plug housing set Article number: 50390772, -773

The cause: The antenna line in the vehicle is faulty

Driving with no radio? That's unthinkable for most drivers: after all, almost everyone listens to music or the radio while on the move. But what happens if the antenna line is faulty, causing the radio to stop working?

Be aware: it goes without saying that the problem can also occur for radio remote controls.

The problem: How do I find the right antenna line for my vehicle?

The faulty antenna line should be replaced as a matter of urgency. However, various FAKRA housings (female and/or male) are usually used in vehicles. In some cases, there may even be no FAKRA housing at all in the form of a mating plug because

the vehicle manufacturers have routed the line along the entire length of the vehicle without any intermediate plugs. How is it possible for the neutral Code Z variant now supplied by Herth+Buss to be used in all scenarios?

The solution: Our repair kits for antenna lines

If it becomes apparent during a repair that a female FAKRA housing is installed in the vehicle, our repair cable can be connected immediately. If the connector in the vehicle is male, the adapter cable with article number 51277244 can be inserted intermediately with a choice of doing so on one side or on both sides. This cable features a connector housing on both ends, allowing it to be used in conjunction with our coaxial cables, which are mentioned above.

We've also considered the scenario whereby no FAKRA housing in the form of a mating plug is present in the vehicle at all. If technicians in the workshop are therefore looking for an option for connecting one individual line with the new repair lines, they can use the adapter cable 51277245. This set of articles comprises a crimped-on female FAKRA contact (+ housing), a crimped-on female FME contact (+ housing) and a male FME contact. The advantage with this article is that the contact can also be soldered. As an alternative, the plug housing set 50390773 may also be used for directly connecting to the antenna line in the vehicle: at the request of workshops, the plug housing sets 50390772 and -773 have been newly added.

Cable Repair Set, trailer plug

Cable Repair Set, trailer plug

Using the repair kit, defective trailer plugs can be replaced, including the first 1.5 m of cable. This results in a sustainable repair, as moisture can also often penetrate the line alongside the defective plug, meaning that further corrosion damage also occurs there sooner or later. After cutting off the defective plug, both open cable

ends are connected using the shrinking crimp connector that can be found in the scope of supply. The thermal contraction hose which is also included serves to protect against corrosion and mechanical influences at the connecting point.

» REPLINE

Two in one

The RepLine repair cables are available in our Elparts range. This range is particularly useful for workshops, which only use a small quantity of crimp connectors in their day-to-day operations. The key benefit: The crimp connectors and cables are already crimped. This removes an entire work process. The costs of purchasing crimping pliers and

a crimping tool insert can also be saved. The user receives the repair cables for the most common male and female crimp connectors in a pack of ten units. This minimizes the expenditure for large packages. Another advantage compared with most conventional PVC cables is the use of highly flexible, temperature-resistant silicone cables.

» APPLICATION EXAMPLE

Connecting the cables

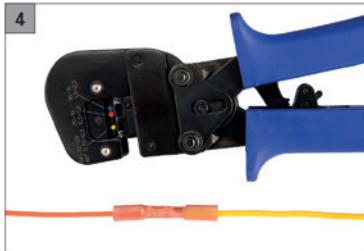

The key benefit of our Replines is that the contacts are already optimally crimped with the silicone lead. This means that the user does not have to carry out the crimping process.

The repair line merely has to be connected with the cable in the vehicle (shown here in yellow). Both cables must be stripped beforehand (e.g. with our stripper).

A crimp, shrink or soldered shrink connector can be used for the connection.

The cables are then crimped with the connector one after the other. In this example with our crimping pliers CrimPro10, alternatively with CrimPro30.

The connectors are then shrunk with a hot air fan.

Electric Cable

Extremely flexible electric cable with very fine diameter of the individual copper strands and highly elastic silicone insulation. Also in use in the Herth+Buss RepCab.

Material: Silicone **Temperature range:** -40 to +180 °C
Surface: Tin-plated

RepPipe

Repair Set, wash water line

Version: NW 4,5mm -> 3,0mm
NW 4,5mm -> 4,0mm

Material: POM (Polyoxymethylene)
Polyamid 6
EPDM (ethylene propylene diene Monomer (M-class) rubber)

Info: with gaskets/seals
with connecting pipe
with adapter

Damaged sections of washing water lines can be replaced quickly and easily using the repair kit. Corrugated pipe connecting pieces, mounting clips and seals in three different diameters, in addition to a 2.5-metre-long corrugated pipe, are all contained to repair corrugated pipelines with a nominal width of 4.5. In

addition, damaged sections of washing water lines made from smooth hoses can be repaired using connecting adapters with diameters of 3 mm and 4 mm. Moreover, hose fittings are contained for the direct connection of smooth hoses.

RepPipe

Repair Set, wash water line

Material: POM (Polyoxymethylene)
Polyamid 6
EPDM (ethylene propylene diene Monomer (M-class) rubber)

Info: with gaskets/seals with connecting pipe

Using the repair kit, a defective point in the washing water line can be quickly and easily replaced. Corrugated pipe connecting pieces, mounting clips and seals in four different diameters, in addition to a 50- centimetre-long

corrugated pipe, are all contained to repair the corrugated pipeline with a nominal width of 4.5.

RepVac

Repair set, negative pressure line

Version: NW 4,5 -> 3-4 mm
NW 4,5 -> 5-7 mm

Material: EPDM (ethylene propylene diene Monomer (M-class) rubber)
POM (Polyoxymethylene)
Polyamid 6

Info: with connecting pipe with adapter

Faulty negative pressure lines made from rubber and hard plastic can be replaced with a modern negative pressure corrugated pipe with the repair kit. The following are included for repairs: straight and angled negative pressure connectors for corrugated pipe with a nominal width of 4.5 for connections with 3-4 mm and 5-7 mm, in addition to corrugated pipe connecting pieces. The assortment also includes fixing clamps, retaining clips and a 2.5-m-long corrugated pipe. The area of use ranges from passenger cars and commercial vehicles to motorcycles and construction machinery. Application examples include negative

pressure connections on: air filter boxes, distributors, MAP sensors, pressure control valves, central locking systems, etc. Advantages of the repair kit:

- universally compatible
- better protection against pine marten bites
- permanently flexible and durable
- smaller diameter than rubber lines
- Replacement for negative pressure lines from older vehicles which are no longer available
- emergency fix in the event of breakdowns
- cheaper than moulded hoses

RepDPF

Repair set, pressure line

Temperature range: -40 to +350 °C
Material: Silicone
Info: with connection line
 with protection hose
 with marten protection
 with clamps

Using this repair kit, defective connecting hoses between the diesel particle filter (DPF) and the differential pressure sensor can be quickly and simply replaced. Pine marten bites may also be responsible for damage, and not just mechanical and thermic influences. That's why this set is supplied with protective hoses

that are resistant to both high temperatures and pine marten bites. They protect the silicone pressure lines from external influences. The spring band clamps included in the scope of supply ensure that the hoses are held securely.

Voltage Limiter, electrical system

The ceramic bulb connector for H7 bulbs features a diode in the positive line. This diode reduces the applied voltage by 0.8 V to an optimum bulb voltage. This protects the H7 bulb from increased voltage peaks, lengthening the

service life. The light power remains unaffected. Limitation: Can only be used in vehicles with removable bulb connections. Please use in pairs.

Bulb Type: H7
Material: Ceramic
Socket Width: 6,3 mm
